

U-LOC® ADHESIVES TECHNOLOGIES INDIA PRIVATE LTD.

**Advanced
Bonding
Solutions.**

U-LOC® Adhesives engineers the next generation of industrial sealants and adhesives. Precision-formulated for automotive, aerospace, and heavy engineering applications.

About Company

U-LOC® Adhesives Technologies: Your Strategic Partner in Advanced Bonding

At U-LOC®, we go beyond being a supplier. We act as an extension of your engineering team, providing the precision, reliability, and innovation required for complex assembly and manufacturing. With over two decades of expertise, we are dedicated to setting new benchmarks in the bonding industry.

- **R&D Excellence:** Our state-of-the-art laboratories are dedicated to formulating cutting-edge adhesives, precisely customized to solve your unique industrial challenges.
- **Quality Assurance:** We adhere to rigorous, ISO-certified manufacturing processes, ensuring consistent, high-performance results in every drop.
- **Global Standards:** Every solution is engineered to meet stringent international specifications and environmental regulations, supporting your commitment to sustainable manufacturing.
- **Expert Support:** Gain direct, unfettered access to our technical team for hands-on application guidance, material testing, and proactive troubleshooting.

Our comprehensive range of industrial adhesives ensures optimal performance across all sectors.

01

Anaerobic Adhesives

High-performance compounds engineered to cure between close-fitting metal joints. Prevents loosening from intense vibration and thermal shock.

03

Epoxy Adhesives

Industrial structural epoxies offering maximum mechanical strength and chemical resistance for load-bearing joints across diverse materials.

05

UV Curable Adhesives

On-demand light-curing adhesives providing optically clear, rapid bonds for glass, plastics, and sensitive electronics.

07

Polyurethane Adhesives

Tough, impact-resistant polyurethane systems designed to provide excellent flexible durability when structural bonding large or dissimilar surfaces.

02

Cyanoacrylates Adhesives

Rapid-curing instant glues designed for high-speed assembly lines. Delivers high-strength bonds on plastics, rubbers, and metals within seconds.

04

Methyl Methacrylate (MMA) Adhesives

Next-gen MMA acrylics combining extreme tensile strength with impact resistance. Bonds metals and composites with minimal surface prep.

06

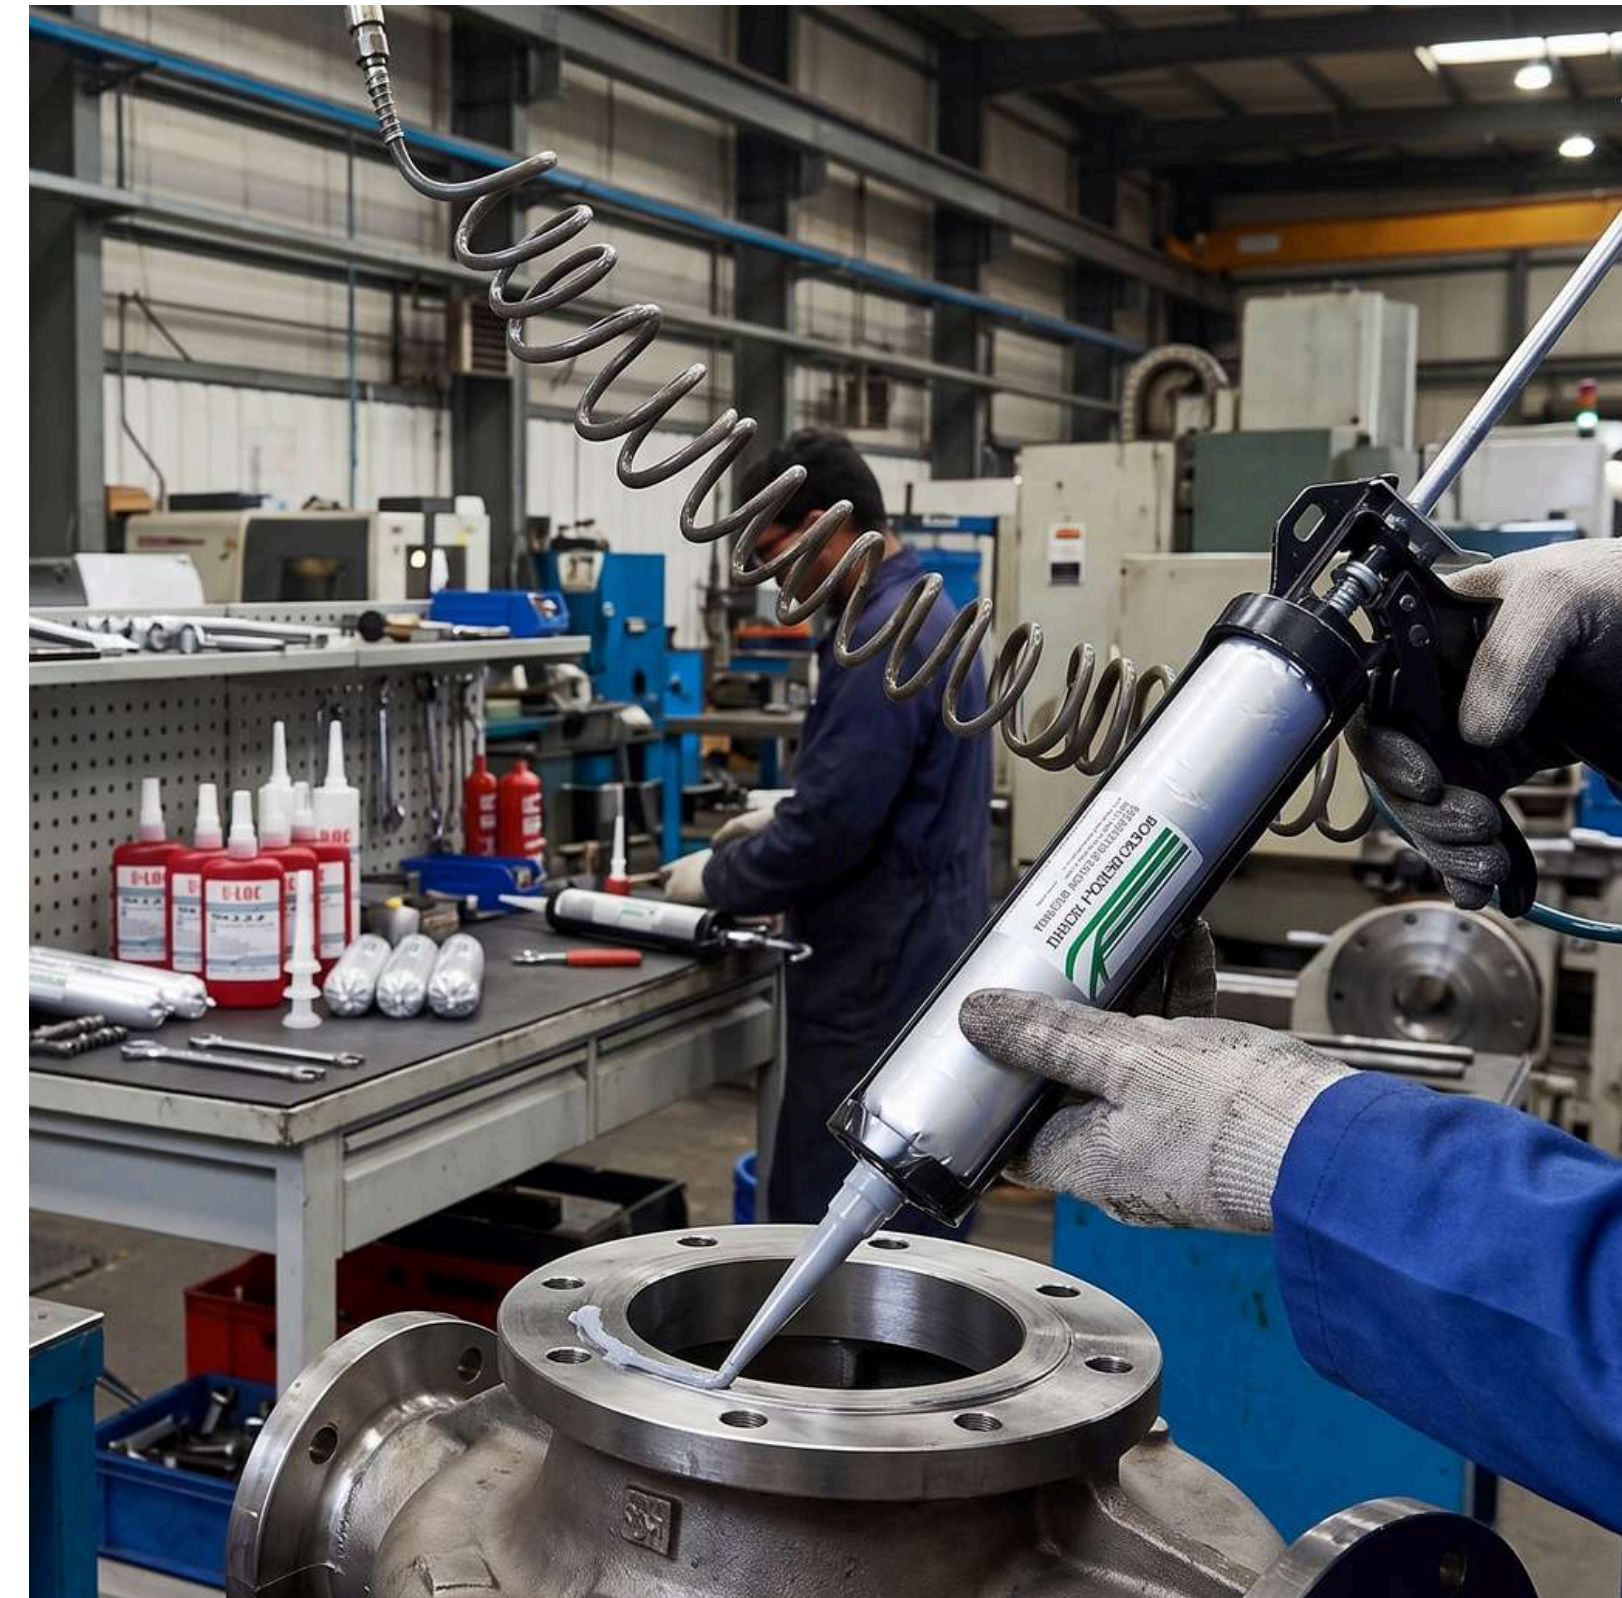

Silicone Sealants

Durable Heavy Body Silicone Gasketing Compounds engineered to withstand extreme temperatures, fluid exposure, and harsh environments.

08

Hybrid Polymer

Advanced isocyanate-free technologies combining polyurethane strength with silicone weathering. Bonds flawlessly even to damp surfaces.
